

## ENGAGING STUDENTS IN ETHICAL DEBATE

**The future is rushing towards us.**

Are we prepared?

How can we be better prepared?

- Want to stimulate critical thinking and explore effective ways of engaging with your students about new scientific developments?
- Want to explore ways to gain confidence in structuring and discussing ethical issues with your students?
- Want to know more about new developments in genetics and how to discuss these with your students?

Sixth form college teachers are being invited to **'Engage with Ethics'** at a FREE interactive event to include;

- A general discussion on how to explore ethical issues/moral reasoning with students
- A case study illustrating the use of contextualisation in discussions to show how different information can change the ethical implications
- A short presentation about a new genetic test (preconception carrier screening) and the ethical questions this raises.

Following the event, there will be an opportunity for students from one college to experience LifeLab, the purpose-built education laboratory at University Hospital Southampton with a tailored programme including ethical discussion and debate.

Hear about the hot topics in genetics from the experts

Learn new ways to stimulate debate

Gain confidence in stimulating ethical discussions
