Health and Care Research

\*I am not a healthcare professional who diagnoses cellulitis. I am delegated to perform study-specific tasks.

**I do not diagnose cellulitis but am a delegated member of the research team\***

**I cannot complete eligibility assessments**

The patient has been assessed as being eligible and provided with a PIS and a 5-day course of flucloxacillin

I consent the patient using the [paper consent form](#) and send it to the SCTU via SafeSend [coat@soton.ac.uk](mailto:coat@soton.ac.uk)

I consent the patient using the [eConsent form](#) on the study database

I complete an [Expression of Interest \(EOI\) form](#) and send to the [SCTU trial team](#) for central consent

I complete the paper [Contact Details Form](#) (this form can be completed in e.g. Word as no signature is required)

I am later informed that the patient provided consent. I ensure that a healthcare professional who has experience in diagnosing and managing cellulitis at my site has signed off an [eligibility paper form](#) or made a statement in the patient notes confirming that the patient is eligible for the trial so that I can complete the eligibility form in the [database](#) on their behalf (I will record the staff members name on this form as the person confirming eligibility).

I ensure that a healthcare professional who has experience in diagnosing and managing cellulitis at my site has signed off an [eligibility paper form](#), or verbally provided confirmation of their eligibility, so that I can complete the eligibility form in the [database](#) on their behalf (I will record the staff members name on this form as the person confirming eligibility).

I send all paperwork that is not entered directly on the database to the [SCTU trial team](#)

I am not on the COAT delegation log

I am a healthcare professional, but not a medically qualified doctor

I cannot complete eligibility assessments or other trial-specific procedures

I am a medically qualified doctor

I can complete eligibility assessments

I provide the patient with a PIS and if they are interested, I prescribe a 5-day course of flucloxacillin

I make a statement in the patient notes confirming that the patient is eligible for the trial to allow confirmation of eligibility once the participant has given consent

I pass details of the patient onto a delegated member of the site research team to receive consent  
or  
I complete an [Expression of Interest \(EOI\) form](#) and send to the SCTU trial team for central consent

SCTU later informs site that the patient provided consent, so any delegated member of the research team at my site can complete either the paper or electronic eligibility form using the statement I provided in the medical notes.

A delegated member of the research team will then take care of the outstanding actions.
