

Integrated Circuit Design

Iain McNally

≈ 12 lectures

Koushik Maharatna

≈ 12 lectures

1001

Integrated Circuit Design

Iain McNally

• Content

- Introduction
- Overview of Technologies
- Layout
- Design Rules and Abstraction
- Cell Design and Euler Paths
- System Design using Standard Cells
- Pass Transistor Circuits
- Storage
- PLAs
- Wider View

1002

Integrated Circuit Design

• Assessment

0% Informal Coursework (L-Edit Gate Layout)
100% Examination

• Books

Digital Integrated Circuits

Jan Rabaey
Prentice-Hall

Principles of CMOS VLSI Design

A Circuits and Systems Perspective

Neil Weste & David Harris
Addison-Wesley 2004

• Notes & Resources

1003

History

1947 First Transistor

John Bardeen, Walter Brattain, and William Shockley (Bell Labs)

1952 Integrated Circuits Proposed

Geoffrey Dummer (Royal Radar Establishment) - *prototype failed...*

1958 First Integrated Circuit

Jack Kilby (Texas Instruments) - *Co-inventor*

1959 First Planar Integrated Circuit

Robert Noyce (Fairchild) - *Co-inventor*

1961 First Commercial ICs

Simple logic functions from TI and Fairchild

1965 Moore's Law

Gordon Moore (Fairchild) observes the trends in integration.

1004

History

Moore's Law

Predicts exponential growth in the number of components per chip.

1965 - 1975 Doubling Every Year

In 1965 Gordon Moore observed that the number of components per chip had doubled every year since 1959 and predicted that the trend would continue through to 1975.

Moore describes his initial growth predictions as "ridiculously precise".

1975 - 2010 Doubling Every Two Years

In 1975 Moore revised growth predictions to doubling every two years.

Growth would now depend only on process improvements rather than on more efficient packing of components.

In 2000 he predicted that the growth would continue at the same rate for another 10-15 years before slowing due to physical limits.

1005

History

Moore's Law at Intel¹

¹Intel was founded by Gordon Moore and Robert Noyce from Fairchild

1006

History

Moore's Law; a Self-fulfilling Prophecy

The whole industry uses the Moore's Law curve to plan new fabrication facilities.

Slower - wasted investment

Must keep up with the Joneses².

Faster - too costly

Cost of capital equipment to build ICs doubles approximately every 4 years.

²or the Intels
